PROFILE

UAE national and final-year BSc Computer Science (Artificial Intelligence) student at The British University in Dubai, graduating January 2027. Currently completing an internship in the IT section at the Federal Authority for Identity, Citizenship, Customs and Port Security (ICP) in AI Ain. Seeking a full-time role in artificial intelligence and machine learning, building on hands-on coursework and projects in machine learning, NLP, robotics (ROS), AI search algorithms and data visualization using Python, Java and JavaScript. Native Arabic speaker, fluent in English.

EXPERIENCE

IT Intern — Information Technology Section

September 2026 – Present

Federal Authority for Identity, Citizenship, Customs and Port Security (ICP) — AI Ain, UAE

- Provide day-to-day IT support to staff, diagnosing and resolving hardware, software, device and user account issues.
- Support network and infrastructure operations, including network connectivity, servers, and user account and permission administration.
- Work alongside the IT team within a federal government environment, following established procedures for access control, escalation and documentation.

EDUCATION

BSc Computer Science in Artificial Intelligence

2023 – 2027 (graduating January 2027)

The British University in Dubai — Dubai, UAE

- Coursework includes machine learning, natural language processing, robotics (ROS), Topics in AI (search algorithms), databases, data visualization, and software engineering.

International Year One in Computer Science

2022 – 2023

University of Essex International College (Kaplan International Pathways) — Colchester, UK

- Passed with Distinction — 80% overall (RQF Level 4, 120 credits).
- Top marks: Object-Oriented Programming (89%), Introduction to Databases (85%), Mathematics for Computing (81%).

PROJECTS

Robotics Module Project

ROS, Python

- Programmed and simulated robot behaviour using ROS (Robot Operating System) in the university robotics module.

AI Search Algorithms — Topics in AI Module

Python

- Implemented and compared AI search algorithms to solve problem-solving tasks.

Dubai Traffic Accident Data Visualization

JavaScript

- Built interactive visualizations of Dubai traffic accident data to surface accident patterns and hotspots.

Data Visualization in Python

Python, Jupyter

- Analyzed and visualized datasets in Jupyter notebooks using Python's data stack.

Hill Top Apartments — University Group Project

Java

- Co-developed a Java application in a team, applying OOP design and Git-based collaboration.

SKILLS

- AI & Machine Learning: machine learning and NLP coursework, ROS (Robot Operating System), Optuna (hyperparameter tuning), AI search algorithms, data visualization, Jupyter Notebooks.
- Programming & Databases: Python, Java, JavaScript, SQL, HTML/CSS.
- IT & Infrastructure: IT support and troubleshooting, network connectivity, servers, user account administration.
- Tools: Git & GitHub, VS Code, Microsoft Office.
- Languages: Arabic (native), English (fluent).
