PROFILE

Final-term BSc Computer Science (Artificial Intelligence) student at The British University in Dubai, seeking an AI/Machine Learning internship in Abu Dhabi (available immediately; university No-Objection Certificate in hand). Completed first year in the UK with Distinction. Hands-on coursework and projects in machine learning, NLP, robotics (ROS), AI search algorithms, and data visualization using Python, Java, and JavaScript.

EDUCATION

BSc Computer Science in Artificial Intelligence

2023 – 2026 (final term)

The British University in Dubai — Dubai, UAE

- Coursework includes machine learning, natural language processing, robotics (ROS), Topics in AI (search algorithms), data visualization, and software engineering.

International Year One in Computer Science

2022 – 2023

University of Essex International College (Kaplan International Pathways) — Colchester, UK

- Passed with Distinction — 80% overall (RQF Level 4, 120 credits).
- Top marks: Object-Oriented Programming (89%), Introduction to Databases (85%), Mathematics for Computing (81%).

PROJECTS

Robotics Module Project

ROS, Python

- Programmed and simulated robot behaviour using ROS (Robot Operating System) in the university robotics module.

AI Search Algorithms — Topics in AI Module

Python

- Implemented and compared AI search algorithms to solve problem-solving tasks in the Topics in AI module.

Dubai Traffic Accident Data Visualization

JavaScript

- Built interactive visualizations of Dubai traffic accident data to surface accident patterns and hotspots.

Data Visualization in Python

Python, Jupyter

- Analyzed and visualized datasets in Jupyter notebooks using Python's data stack.

Hill Top Apartments — University Group Project

Java

- Co-developed a Java application in a team, applying OOP design and Git-based collaboration.

Library Website — University Project

HTML, CSS, JavaScript

- Developed a library website front end as part of university coursework.

Text-Based Game in Python

Python

- Designed and programmed an interactive text-based game with branching logic.

SKILLS

- Programming: Python, Java, JavaScript, HTML/CSS, SQL
- AI / Data: machine learning & NLP coursework, ROS (Robot Operating System), Optuna (hyperparameter tuning), AI search algorithms, data visualization, Jupyter Notebooks
- Tools: Git & GitHub, VS Code, Microsoft Office
- Languages: Arabic (native), English (fluent)
